CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

CC The invention relates to a chemically synthesized double stranded short

CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a

CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,

CC where each strand of (I) has 19-23 nucleotides, and does not require the

CC presence of nucleotides having a 2-hydroxy group for mediating RNA

CC interference. (II) is useful for treating diseases e.g., asthma, allergic

CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary

CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,

CC Alzheimer's disease or urinary incontinence. (II) has increased resistance

CC towards nuclease. Double stranded short interfering nucleic acid molecule

CC was produced by solid phase oligonucleotide synthesis method. This

CC sequence represents an example of a siRNA molecule of the invention.

XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimers disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.
